EXPERIENCE

UX Content Designer II – Intuit

October 2023 – Present

- Lead content design for compliance-critical professional tax products (Lacerte, ProSeries, ProConnect) in Intuit's ProTax Group, owning the in-product help, information architecture, terminology, and deep-linking systems that help accountants self-solve at the moment of need.
- Partner with legal, compliance, tax development, and engineering to keep member-facing content accurate as regulations change, balancing company obligations with clear, trustworthy language.
- Look for the slow, error-prone parts of how our team writes and maintains content, then design and build tools to fix them. That work has grown into the AI authoring infrastructure Intuit's Customer Success help-content writers now work through.

Selected Impact

- Designed and built the AI authoring plugin Intuit's Customer Success writers use to edit the live help knowledge base in plain English. Its 18 skills turn Jira tickets, SME requests, and product specs into reviewed Drafts, with one human approval before publishing, a before/after report, and rollback on every change. Shipped through Intuit's internal plugin registry; three writers updated 150+ articles with it in the first week, about three times a normal week.
- Gave writers bulk editing across 20,700+ help articles and content blocks for the first time: CSV-driven find-and-replace, tag, and SEO changes with an audit receipt. Cut a single edit from 3–5 minutes by hand to about 30 seconds and replaced an 8-step manual edit flow with one command. Teammates estimate it saves ~1,060 hours a year on the team's top content refresh tasks.
- Moved the team to a new authenticated production access path ahead of a hard cutoff. Verified it on Mac and Windows, removed shared credentials so every change is recorded under the writer's own name, and wrote plain-language setup and sign-in repair guides for non-technical writers.
- Won an internal Intuit AI skills competition, then built the resulting Master Content Plugin from a product PRD. It turns a feature spec into a per-brand launch package (expert and customer FAQs, knowledge base audit, brand voice and AI-readiness review) for TurboTax, Credit Karma, and ProTax. A live audit found 69 affected articles in 47 seconds.
- Designed and built Authoring Accelerator Agent to keep TurboTax Digital Assistant authoring running after a 7-person expert team offboarded. It processes 100 customer utterances in under 5 minutes (down from 2 business days), writes style-guide-compliant responses with confidence scoring, and cut full expert review to ~23% of outputs. Since extended to a ~7,000-article ProTax corpus.
- Automated daily updates to compliance-critical help articles: a Python script cut the daily Agency Approvals update from 30–60 minutes to about 5 seconds, and scheduled automations now rebuild and publish the Delayed Acknowledgments article with no writer involved. New known issues are proposed for review, never published automatically.
- Built an AI-ready content corpus by programmatically structuring ~4,000 help articles with their metadata and URLs, and extended content systems to Canadian products and bilingual (EN/FR) content.
- GenAI Ambassador and the first Claude Code adopter in the ProTax group; team Rockstar award (August 2026); guest lecturer at the University of North Texas.

UX Content Designer – CGI Inc.

June 2021 – June 2023

- Designed UX content for complex B2B platforms for AT&T Business, translating dense technical, legal, and contractual requirements into clear UI language that helped enterprise customers make confident decisions across hundreds of service locations.

- Partnered with product designers, engineers, and client stakeholders to define information architecture, content patterns, and voice & tone frameworks; mapped journeys and flows to surface risk points, edge cases, and moments of confusion.
- Won first place in CGI's VR innovation challenge with CGI Meditation Experiences, a VR meditation concept for remote workers: concept, pitch, and demo.

Web Content Writer – University of North Texas September 2019 – June 2020

- Wrote editorial content for the UNT Technical Communication website from faculty, student, and industry interviews, published to editorial and accessibility standards.

SKILLS

Content Design · UX Writing · Content Strategy · Content Systems & Operations · Information Architecture · In-product Help · Voice, Tone & Terminology · AI Systems Design · Human-in-the-loop Workflow Design · Prompt & Skill Design · AI Output Evaluation · Cross-functional Collaboration · Legal, Privacy & Compliance Partnership

TOOLS

Claude Code (plugins, skills, hooks) · MCP · Python (scripting & automation) · GitHub · WordPress (Gutenberg) · CSV/XML · Figma · Jira · Smartsheet · Confluence · Adobe Creative Suite · Google Analytics

EDUCATION

University of North Texas
B.S. in Professional & Technical Communication · Minor: English (Creative Writing Focus)
